

COVID-19 Personal Protection Screens

In line with government guidelines ESP Ltd were asked by some of our major clients to develop a number of Personal Protection Screens for use in numerous industries to include the Food & Beverage, Pharmaceutical and Chemical industries.

The screens are food safe and able to be cleaned using detergents utilised in these industries.

These can be manufactured from a variety of materials including Stainless Steel (304 or 316 grade), are fully welded and can be fitted with either solid FDA approved plastic panels or flexible FDA approved sheeting/curtains.

We offer a standard range of fixed or portable screens and are able to tailor make bespoke screens to the clients specifications or requirements.

We are happy to offer advice and even to visit clients manufacturing facilities where required to assess and advise on their requirements.
